ABSTRACT

Purpose of this study are I) to study the people's participation level on urban development in Phra Khanong district towards the Bangkok Metropolitan Administration (BMA) policy in 6 aspects of: a. economic, commercial and tourism; b. security in life and assets; c. environment; d. education; e. health; and f. traffic, and II) to compare people's participation in terms of age, income, and education. Sampling units are 253 people in Phra Khanong district. Data surveyed questionnaires are analyzed in frequency percentile, arithmetic, mean, standard deviation, One-Way analysis of variance. F-test, and multiple comparisons by LSD (Least Significant Different) method. Findings were as follows: 1) People participated in a medium level; from traffic, environment, education, security in life and assets, health, and economic, commercial and tourism respectively. 2) Comparing of people participated between ages, income and education found that people in different age have no different participation on traffic, while different in economic commercial and tourism, security in life and assets, education, health, and environment. People in different incomes have no different participation on security in life and assets, environment, and traffic, while different in economic commercial and tourism, education, and health. People in different education have no different participation on environment and traffic, while different in economic commercial and tourism, education, health, and security in life and assets.
